ABOUT ME

I am a motivated Angular Developer with 2 years of experience in building scalable and responsive web applications. I am proficient in TypeScript, RxJS, and Angular Material, and I have extensive experience in integrating RESTful APIs.

EDUCATION

M.SC IN PHYSICS

Year of passing : 2023

Kongunadu Arts and Science college,
Coimbatore.

B.SC IN PHYSICS

Year of passing : 2021

St Joseph's arts and science College,
Trichy.

TECHNICAL SKILLS

HTML

CSS

Bootstrap

Javascript

Typescript

Canva

Git & GitHub

Basic knowledge in : Node.js, PostgreSQL

Angular

RxJs

NgRx

Dependency Injection

Lazy Loading

Integrating REST API's

Signals

CERTIFICATIONS

Completed a certificate course in Login
360, Chennai on Fullstack Developer.

WORK EXPERIENCE

I have 2 years of experience and have been working at Savyasasy Software Solutions since May 2024. I have contributed to the development and enhancement of Schoolchimes, which is a comprehensive, end-to-end School ERP application.

PROJECTS

UNIVERSITY STAFF MEETING MANAGEMENT SYSTEM FOR RAJIV GANDHI UNIVERSITY OF HEALTH SCIENCES KARNATAKA

Developed the frontend of a comprehensive web application designed to manage staff meetings across multiple colleges under a single university. The system includes functionalities such as meeting creation, attendance tracking, and meeting allowance claim management.

- User Access : Implemented separate login portals for Admins and Staff members.
- Admin Portal : Enables admin users to create staff accounts, schedule meetings, and manage allowance claims.
- Staff Portal : Allows staff members to view meeting schedules, attend meetings, and submit allowance claim requests.

SCHOOLCHIMES – SCHOOL ERP APPLICATION

1. Module Contributions & Support

- Worked on the development of the Inventory and Library modules.
- Designed and implemented the User Interface (UI) for the Fee Report section.
- Provided live production support to resolve real-time issues.

2. WhatsApp Integration

- Designed a WhatsApp template creation interface featuring a real-time preview panel on the right side.
- Implemented a template list to track the approval status of each template.
- Developed the functionality to send messages using the created and approved templates.

3. User Privileges

I developed a user privilege system where, instead of managing menus for a single school, administrators can manage permissions for a group of schools. I created a mechanism to manage menu access for both the main school and branch schools simultaneously. Additionally, I implemented a "School Switch" option, allowing Group Administrators to switch between schools after logging in once, without needing to log out and log back in.

4. Data Security Implementation

Data Security Implementation to enhance the security of sensitive data, I implemented end-to-end data encryption as part of the backend-to-frontend communication workflow. Although my backend knowledge is at a basic level, I researched and learned secure methods to protect user data.

- Sensitive data is encrypted on the server-side using a secure algorithm before being sent to the client.
- The encrypted data is safely transferred to the frontend and decrypted using a secret key on the client side.

By implementing this mechanism, I gained hands-on experience with security principles such as encryption, decryption, and key management, while improving my understanding of secure data flow.

5. Parent-Teachers Meeting (PTM) Scheduling Module

I implemented a new Parent-Teachers Meeting feature, enabling a seamless and centralized scheduling system across the Staff, Parent, and Admin portals.

- Staff Portal: Teachers can create available meeting time slots by selecting the date, time, and duration, giving them full control over their schedules.
- Parent Portal: Parents can view available slots and book appointments at their convenience. The system includes logic to ensure no double-bookings and provides real-time updates for both parties.
- Admin Portal: Admins can centrally monitor all booked appointments, handle slot changes or cancellations, and maintain a clear overview of all meetings.

This module significantly improves communication, promotes transparency, and enhances scheduling efficiency, contributing to a more organized school management system.

DECLARATION

I certify that the information contained in this resume is true and complete to the best of my knowledge.

Regards,
Jeeva Rathinam P
